

Valves for landscaping

Dorot

The Dorot 80 2-way diaphragm valve is specially applicable for landscaping and garden irrigation. The valve is fast closing and contains a throttle to reduce flow or even completely close off the valve.

Different solenoids can be mounted on the valve, fitting almost any controller. The valve has a wide passage and a low head loss.

Dorot-80 2-way

-LATCH

Automation

In order to automate just one valve i.e. the Geva 75 irrigation controller can be used. Check chapter 14 Landscaping, "Geva-75 irrigation controller" for more information.

For the automation of multiple valves check the Hunter controllers mentioned in chapter 14 or check chapter 12 Digital Farming for more valve control automation solutions.
