

Right-angled Kameleon Dripper/High

In response to the growing demand for right-angled drippers and detachable microtube/stakes for export, Netafim has launched export-friendly versions of the trusted Kameleon and Kameleon High drippers. The Kameleon dripper with nipple outlet can be supplied assembled with separate microtube and stake kits, with an angled outlet of your choice. The kits are supplied separately, so nothing sticks on the roll during transport.

APPLICATION

Drip irrigation systems principally for export projects or projects with a strict hygiene protocol, and where the microtube/stake has to be (temporarily) removed from the dripper.
